PUBLICACIÓN: URBAN CLIMATE GOVERNANCE, THE LATIN AMERICAN EXPERIENCE

Current climate change policy takes place at different institutional levels. On the one hand, governments are trying to find a political framework for a global climate agreement under the auspices of the United Nations. On the other hand, a variety of local initiatives, especially city networks have been established in recent years and auton-

omously implement measures to combat climate change and exchange best practices.

Focusing on Latin America, Brazil in particular, this paper showcases opportunities for cooperation between cities and businesses that have the potential to further accelerate the process of combating climate change and are thus instrumental to achieving a more sustainable form of urbanization. STATEMENT: FLAVIO LIRA, FELLOW SELECTED FOR THE PROGRAMME EUCERS KAS- 2014

Flavio Lira. Programme Fellow KAS-EUCERS 2014.

"Right now I'm in the middle of my research on the political, historical and economic situation of hydrocarbons in Brazil. I have participated in several meetings of researchers in Europe to discuss and describe my study, obtaining very enriching results. In early April I was in Oslo, Norway, where I presented the current status of my initial assessments and Latin American specialists' conclusions. Also, I participated as an exhibitor at the International Conference of Energy organized by KAS in Berlin in May. When I return to Brazil, I will continue with the research I've begun under the support of KAS, from the university where I work (Federal University of Pampa), hoping to strengthen the bonds of the State Rio Grande do Sul and Brazil with European universities with I've had experience, which are the major lines of development of the Konrad Adenauer Foundation. "
