

## RULE OF LAW RULES

On the occasion of commemorating this year's Data Protection Day also known as "Privacy Day" or "Data Privacy Day", Konrad Adenauer Stiftung under the aegis of its Rule of Law Worldwide Programme has launched its newest podcast focusing on the rule of law in the age of digitalization dubbed 'Rule of Law Rules'.

This podcast will feature talks with international experts from different regions of the world discussing opportunities and challenges for human rights in the digital age. The content will focus mainly on data protection issues, legal tech and the use of artificial intelligence.

The host of the podcast is Dr Angela Daly, a socio-legal scholar of digital technology.

The first guest is Frederick Richter. He is the director of the German Foundation for Data Protection and he gives us insights on how the General Data Protection Regulation has influenced the world and the EU/Germany in particular. Stiftung Datenschutz (Foundation for Data Protection) was established by the German Federal Government in 2013. The non-profit incorporated foundation offers a neutral forum for debates around effective and efficient data policy and develops recommendations for privacy politics.

The first episode looks at the EU's General Data Protection Regulation, better known as the GDPR: How has it influenced data protection worldwide? How is data protection handled in other parts of the world?? How can we establish international standards? And what will happen next?
